

Welcome to Google AI Essentials Learning Circle

session 1

Google AI Essentials Learning Circle

session 1

Cathy Duong
April 15, 2025
tpl.ca/learnai

Land Acknowledgement

Toronto Public Library is situated on Indigenous land and Dish with One Spoon territory. This is the traditional territory of the Haudenosaunee Confederacy, the Wendat, and the Mississaugas of the Credit First Nation. Toronto Public Library gratefully acknowledges these Indigenous Nations for their guardianship of this land.

agenda

Introduction

- Icebreaker
- How this course works
- Module 1
 - key concepts and group discussions
 - knowledge check
- Q&A
- Next steps
- Resources

hello, nice to meet you!

Cathy Duong

I am a librarian at Toronto Public Library

My role is a facilitator to ensure a
positive learning environment

let's introduce ourselves in the chat

icebreakers

- Why are you interested in this course?
- What do you look forward to applying after taking this course?

introducing Google AI Essentials course

why take this course?

Benefits:

- Understand the basics of AI and what AI can and can't do
- Practice prompting skills through AI tools
- Use AI to increase your productivity
- Increase your skills and knowledge to support employment goals
- Free access to Coursera course (value of \$70 CAD)
- Earn a valuable certificate and digital badge through this course

certificate and badge

why join this learning circle?

Benefits:

- Gain a deeper understanding of the course material
- Increase your chances of course completion
- Be part of a community of learners all supporting each other
- Have access to resources curated by library staff

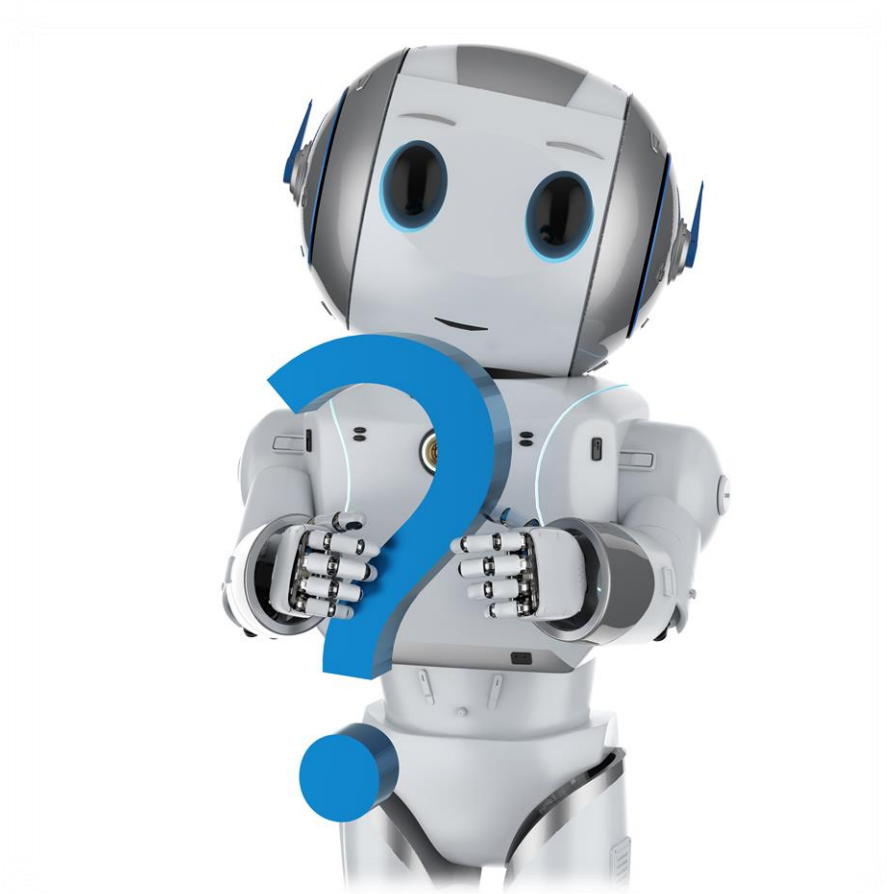

schedule

Session #	Modules Covered	Class Title
1	Introduction & Module 1	Introduction to AI
2	Module 2	Maximize Productivity with AI Tools
3	Module 3	Discover the Art of Prompting
4	Modules 4 and 5	Use AI Responsibly & Stay Ahead of the AI Curve

how long will it take to finish the course?

- Approximately 10 hours to complete (in addition to the learning circles)
- We will cover the course in 4 learning circles, 2 hours long
- Our session meetings will run from April 17 to May 8,
- You will have access to the online course until May 15 (1 week after the last session)
- More learning circle dates will be announced over the next two years. Visit tpl.ca/learnai for new dates.

any questions or comments?

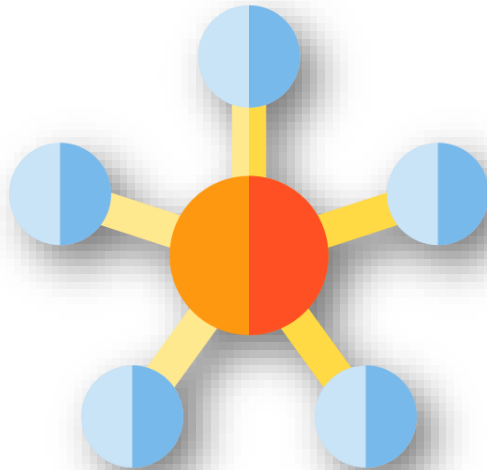

what is a learning circle?

traditional classroom

Teacher explains all the course material, tests the student's understanding and assigns grades.

learning circle

Participants study the course material on their own. Facilitator leads student discussion with the goal of clarifying and embedding the material. Facilitator does not assign grades.

expectations

Learners are expected to:

- Attend weekly learning circles and complete assigned modules before each learning circle
- Commit approximately 2-3 hours weekly to course work outside of learning circle time
- Support your fellow learners and treat everyone with respect

Facilitators are expected to:

- Work with learners to complete the modules
- Reply to learner email(s) within two business days (M-F)
- Treat all learning circle members with respect

learning environment
Zoom platform & Coursera

first impressions of the course

module 1

introduction to AI

module 1: introduction to AI

Learning goals

- Define the field of AI
- Explain how AI functions at a basic level, including how AI technology is trained to learn from data
- Describe the capabilities and limitations of AI tools
- Recognize the importance of human oversight when using AI

module 1: overview

This module introduces the important concept of Artificial Intelligence (AI) and its growing relevance in the workplace.

- AI as a cognitive tool
- how AI works
- AI in the workplace and strategic use of AI

Key takeaway

- AI has the potential for positive change when used ethically and collaboratively ↗

group discussion

definitions part 1

Artificial intelligence (AI): Computer programs that can complete cognitive tasks typically associated with human intelligence

Machine learning (ML): A subset of AI focused on developing computer programs that can analyze data to make decisions or predictions

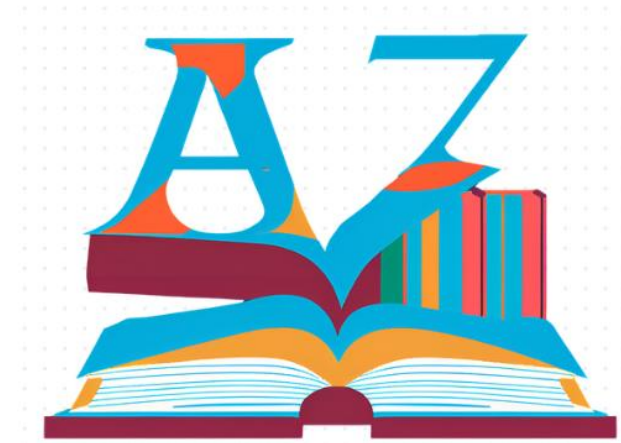

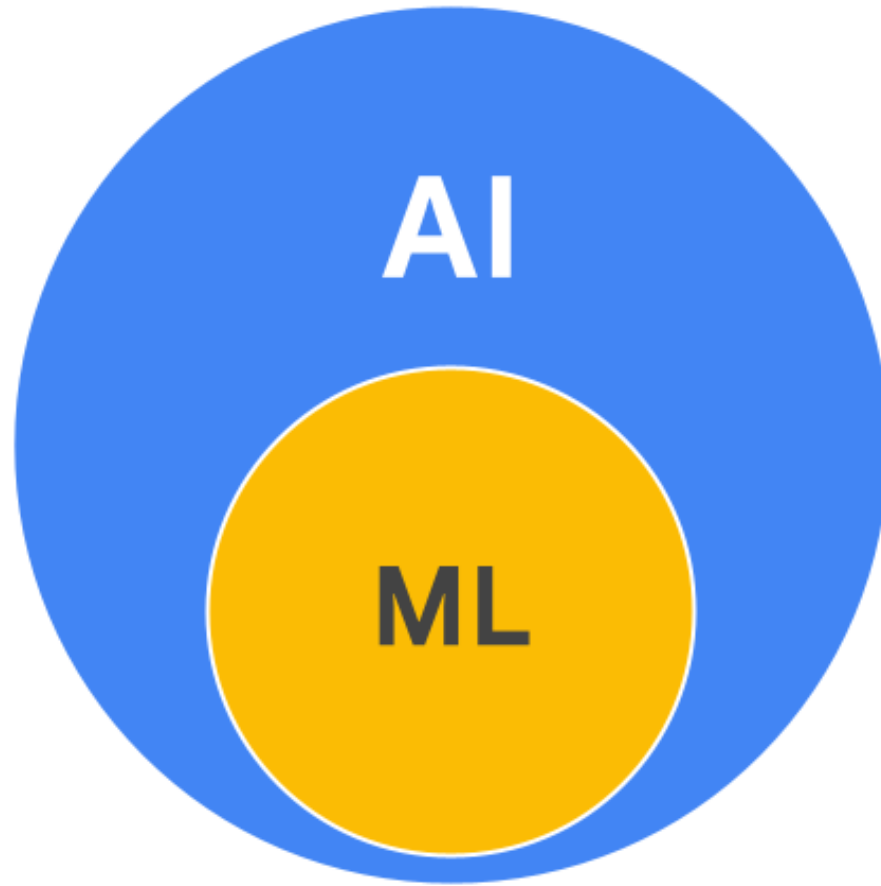

diagram of AI

definitions: examples

Examples of Artificial intelligence (AI): goal is to build smart machines

- Voice assistants like Siri or Alexa
- Self-driving cars
- AI in customer service chatbots
- AI in facial recognition
- AI playing chess

Examples of ML: learns from pattern recognitions

- Netflix recommending movies
- Email filtering spam
- Predicting stock market trends
- Identifying objects in photos
- Language translation

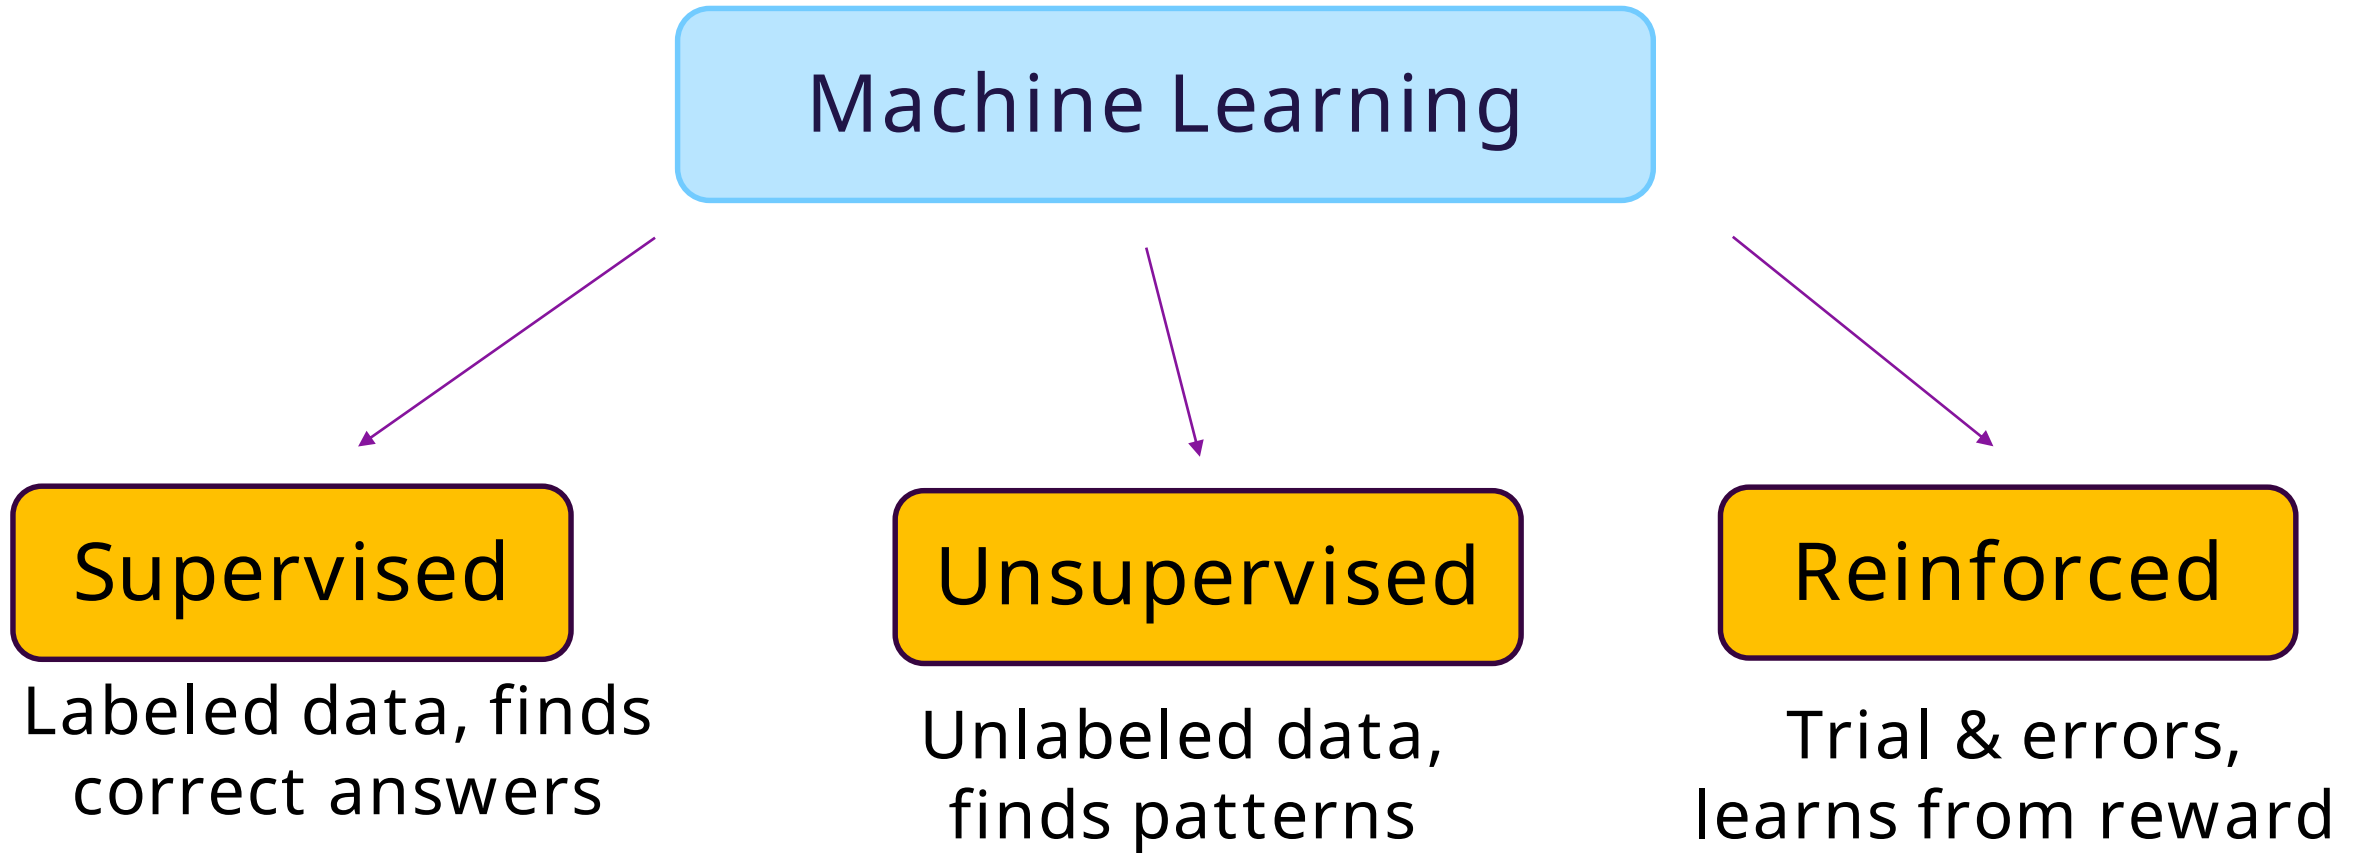

AI vs. ML

car and engine analogy

Concept	Car	Engine
AI	The full car	A smart system that can make decisions
ML	The engine inside the car	A learning mechanism that powers AI with data
Data	The fuel	ML needs data to run, just like engine needs fuel
Rules/ Algorithms	GPS/ navigation system	Guides the car (AI system) in the right direction
Human input	The driver	Human designs and monitors how AI works

types of machine learning

module 1: discussion

What does artificial intelligence mean to you, and where have you encountered it in your daily life, both personally and professionally?

AI at work

module 1: use of ai

We've heard about tasks that AI can help with. Which two or three of them seemed the most helpful to you?

definitions part 2

Large language model (LLM): An AI model that is trained on large amounts of text to identify patterns between words, concepts, and phrases so that it can generate responses to prompts

Prompt: Text input that provides instructions to the AI model on how to generate output

module 1: discussion

Which parts of society do you see an increase in the use of AI to solve problems?

module 1: discussion

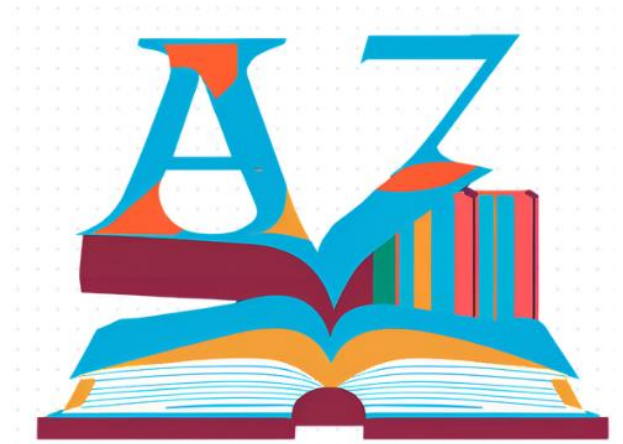

What are the benefits and limitations of AI? Why is it important for people to use critical thinking when working with AI?

definitions part 3

Responsible AI: The principle of developing and using AI ethically, with the intent of benefiting people and society while avoiding harm

Systemic bias: A tendency upheld by institutions that favors or disadvantages certain outcomes or groups

module 1: benefits vs limitations

What are some potential benefits and drawbacks of using AI to enhance our productivity with completing daily tasks?

module 1: economic impact

How do you think AI will impact jobs and the economy?

knowledge check

knowledge check: what is ai?

What is AI?

- A. A computer program that can think and make decisions just like a person
- B. A computer program that can complete some tasks typically associated with human intelligence
- C. Software that can create new material

correct answer: what is ai?

What is AI?

A computer program that can complete some tasks typically associated with human intelligence

q&a

tpl:

session summary

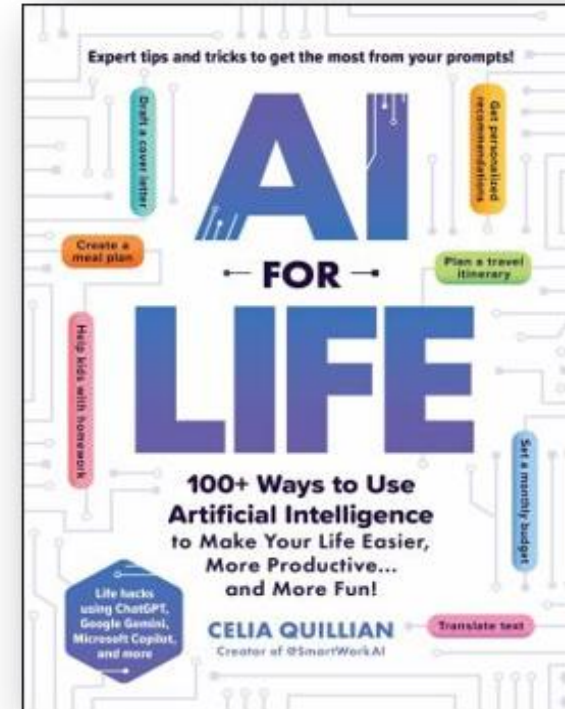

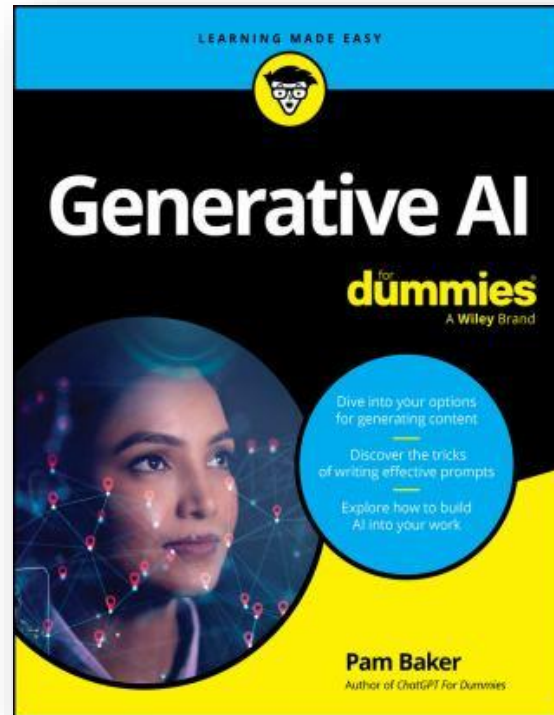

- Definition of AI: AI involves using machines to perform tasks requiring human intelligence, such as decision-making, language understanding, and learning from data.
- How AI Functions: AI tools are trained on large datasets, using machine learning to analyze patterns and make predictions or decisions based on data.
- Capabilities and Limitations: AI can process vast amounts of data quickly, but it has limitations, such as potential biases in training data and its reliance on human oversight for optimal performance.
- Real-World Applications: AI is transforming industries like healthcare, finance, and transportation by streamlining processes and improving decision-making.
- Human Oversight: Effective use of AI requires human oversight to address biases and ensure responsible and ethical applications in business.

support resources

- Office hours
- Additional learning resources from TPL
- FAQ link in Coursera
- Technical support from Coursera
- Peer discussion forums in Coursera

resources: booklist

Gale Courses

- 6-week, instructor-led courses. Two lessons per week. Free with a library card.
 - Introduction to Artificial Intelligence
 - Introduction to Machine Learning

LinkedIn Learning

- Thousands of high-quality, instructional video on variety of computer and business topics. Free with a library card.
 - What is Generative AI?
 - How to Boost your Productivity with AI Tools
 - Artificial Intelligence Foundations: Machine Learning
 - Generative AI for Business Leaders

resources: classes

Let's Learn Tech

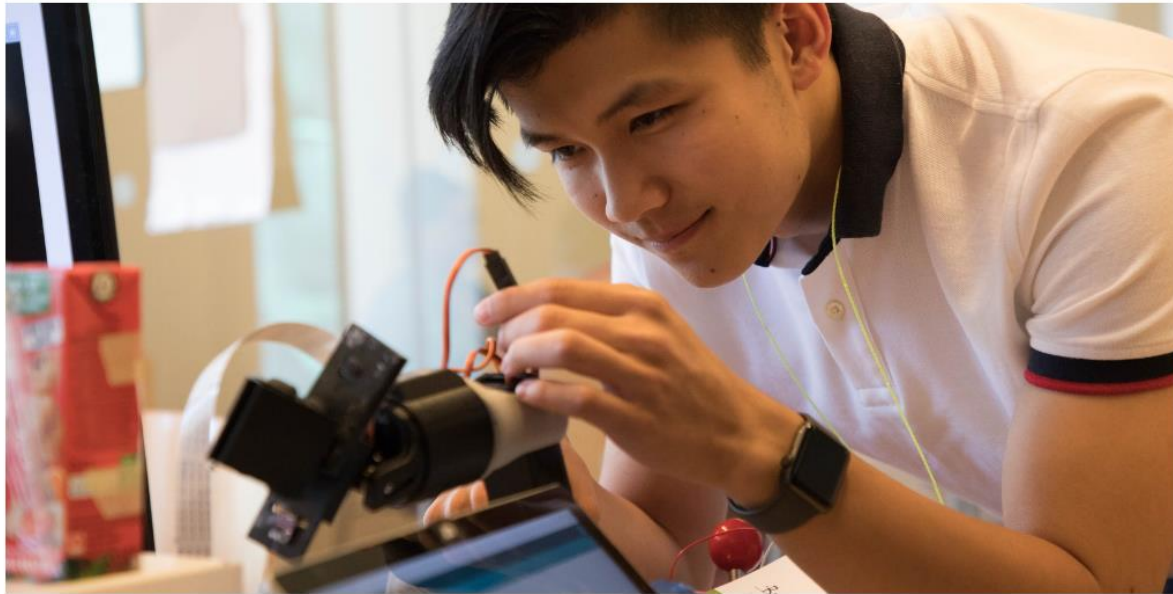

- Free, interactive and self-paced online courses to help you develop skills in technology.

Computer and Library Training

- Free in-person computer classes, ranging from basic (ex. Microsoft Word) to advanced (ex. Coding lessons).
